Nufarm Announces New Herbicide Registration

Morrisville, NC – [Nufarm Americas, Inc.](#) is pleased to announce the registration of Panther® Pro herbicide for broad spectrum weed control in burndown, pre-plant and pre-emergent applications to soybeans. Panther Pro also provides excellent residual control of weeds in crop-fallow and non-crop bare ground uses.

Panther Pro provides residual control of more than 60 weeds, including glyphosate-resistant populations of common waterhemp, horseweed and common ragweed. It also controls susceptible winter annuals and other listed weeds in fallow land and soybeans. In accordance with label restrictions, this product may be mixed with glufosinate or glyphosate formulations labeled for burndown programs, such as those in the [Nufarm C.A.T.S portfolio](#). Panther Pro can be used in a:

- Fall burndown
- Fallow seedbed program
- Spring burndown program for emerged weeds

“Panther Pro has been thoroughly tested over the past three years and it is the first liquid flumioxazin combination product labeled for pre-plant and pre-emergent use on soybeans. It provides broad spectrum control of grasses and broadleaves, 3 modes of action and is great for many glyphosate-resistant weeds,” said Bob Bruss, Ph.D., director of ag technical services for Nufarm.

The newest addition to the Nufarm crop protection portfolio, Panther Pro meets the value, efficacy and innovation demanded by today’s growers.
