**Sativa® IMF Sembolite™ MAX**

Sativa® IMF Sembolite™ MAX combines all the protection of Sativa IMF MAX with the metabolic benefits of Sembolite in one convenient premix. Sembolite works inside the plant to optimize nitrogen utilization, resulting in faster germination and emergence, stronger plants, and greater yield potential. Sativa and Sembolite together give barley and wheat crops a strong start.

**FASTER EMERGENCE & BETTER STAND**

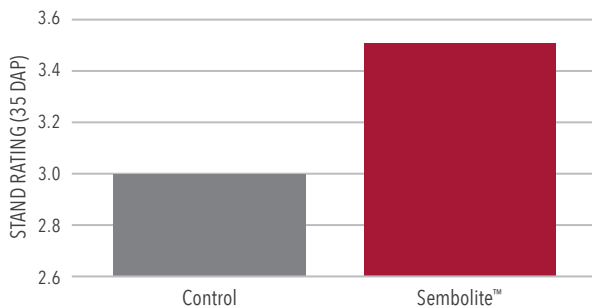

**HOW SEMBOLITE WORKS**

Unlike other products that are fertilizers or act upon nutrients in the soil, Sembolite works inside the plant, stimulating the utilization and uptake of nitrogen through a pathway that is present in all plants. This increased regulation keeps the plant in growth mode; creating more amino acids and proteins.

Since nitrogen is the basic building block for grain production, stimulating more uptake results in larger, healthier plants, well prepared for grain fill and maximum yield capacity.

The net effects of Sembolite are: more efficient use of nutrients, faster germination and emergence, stronger healthier plants and greater yield potential.

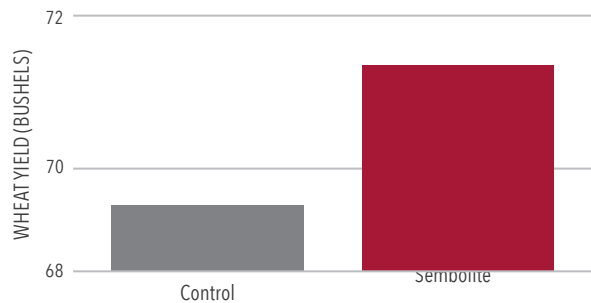

**INCREASED WINTER WHEAT STAND**

Greenhouse data and field trials

**WHEAT YIELD INCREASED BY 2.7 BUSHELS**

**MORE NITROGEN = MORE BUSHELS**

Replicated trials in North Dakota, South Dakota, Wisconsin, Ohio, Idaho, Kansas, Georgia, Illinois, 2014-2015
